WHEN LESS
MEANS MORE

Simon 3 packs a new level of advanced wireless security into a console design that is smaller and more attractive than anything that has come before. Simon 3 has more 'high value' consumer features, incredible new performance and the built-in quality that has made ITI the most trusted wireless brand in the world. Simon 3 proves that great things really do come in small packages!

MORE NEW FEATURES MORE SALES OPPORTUNITIES

Success that comes from proven performance.

Dealers have relied on Simon for flawless performance for more than five years. While others have tried to copy, there's only one original and only one company with the experience and support to provide you with the tools for success.

Keep your revenue source strong.

Customers who stop using their system are likely to cancel their monitoring contract. Simon 3's new "lack-of-use" reporting gives the monitoring service the opportunity to contact the customer and find out what's wrong before the service is cancelled.

Less worry for your customers.

Simon 3 keeps your customers informed and involved. It can call any telephone or pager and deliver clear voice messages of system events such as alarms, latchkey and more.

More market potential means more sales.

The affordable and reliable Simon 3 is the perfect choice for apartments, condominiums, retrofit applications, or any home. With multiple languages including Braille, you can reach out to many different markets.

Easy installation and top notch marketing support means more profit.

Simon 3 installs in minutes. Clear-cut installation diagrams and extensive voice prompts make installation virtually foolproof. We've invested in a wide variety of marketing support materials so you don't have to. Bottom line, Simon 3 means more installations in less time, and that adds up to more profit for you.

Easy to understand system operation.

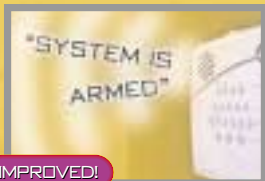

Simon 3 has a new voice that's clearer and easier to understand. An updated and larger vocabulary helps talk customers through operation, directing every step. Even a small child can follow the instructions and manage the system.

There's more than one route to more revenue.

Water and freeze sensors, CO detectors, hands-free 2-way voice, home and light control functions mean you can upsell for higher revenues and create very satisfied customers while you're at it.

Talking Panel – A new and improved voice with a larger vocabulary talks you through programming and your customer through operations.

IMPROVED!

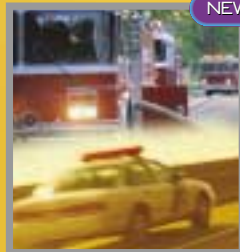

NEW!

Telephone Messages – Customers receive clear voice notification of alarms, latchkey status and more.

Hands-Free 2-Way Voice – Optional feature provides Voice Activated Switching (VOX), removing the hassle of pressing buttons and talk/listen sequences.

NEW!

NEW!

Emergency Buttons – 3 programmable emergency buttons your customers can use to summon help for different types of emergencies.

IMPROVED!

Programmable Access Codes – Up to 6 individual 3, 4, 5 or 6 digit codes so each family member has his/her own private code.

Arming Level Status LED – Users can confirm arming status at a glance.

NEW!

24-Hour Backup Battery – Keeps the system up and running in the event of longer power outages.

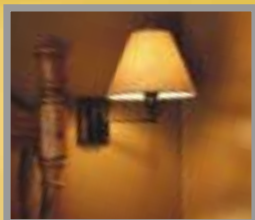

Remote Control – The ultimate convenience for your customer.

Unique 2-Way Talking Touchpad – Only Simon 3 offers a supplementary 2-Way talking touchpad to serve a back door or master bedroom.

X10 Control – Control lights, appliances, and more by time schedule, keychain touchpad or sensor.

NEW!

Lack-of-Use Reporting – Increase customer service while reducing account attrition rates.

Latchkey Messages – Inform parents by phone or pager if a child has not arrived home.

IMPROVED!

Off Premise Telephone Control – Customers can access Simon 3 remotely by telephone.
